

Experienced Full Scope Architectural Services:

MCCM Architects is a Houston based firm that offers full scope Architectural services for public and private sector clients. Business services include complete project development (architectural and landscape design, mechanical, electrical, plumbing, and structural engineering) and management. While MCCM Architects experience includes a broad range of project types we have had the opportunity to design some exceptional recreational facilities, including park pavilions, concession facilities and other park support facilities.

Award Winning Design Approach:

The principals of MCCM Architects each have over forty years experience providing hands-on professional architectural services and are actively involved in every project from pre-design to final completion. The firm rejects “cookie-cutter” design approach. Instead, we create design solutions unique to each individual project combined with reliable old-fashioned client services. Our experience and passion is architecture, and we offer a full range of services that will take your Park Facility seamlessly from start to finish.

Design Diversity:

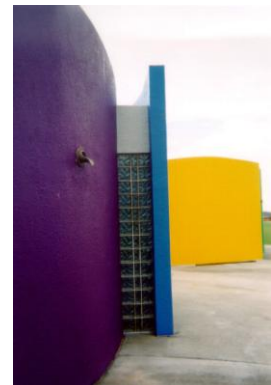

MCCM Architects has had the privilege of creating vastly different environments within a broad range of project types. Each project’s creative design approach is inspired by a broad array of knowledge gained from a diverse experience. Our success is due in large part to the personal dedication and time our principals afford each project and client, making each creation a true custom masterwork.

Listen and Involve the Client:

MCCM Architects and the team members we have assembled to deliver your Concessions Building have extensive experience with hundreds of completed projects both large and small. We have the proven ability to work with and lead teams of design professionals. We take special pride in our open approach and flexibility in working with our clients through project design and implementation. We involve our clients and other stakeholders in the decision making process as a way to better meet their individual needs and goals. In short, the MCCM design team works cohesively as an extension of the client team. The process of bringing together client groups, stakeholders, staff, councils and boards is a standard part of our practice. This approach allows for the best possible solution for each project.

Constant Focus on Providing the Best:

- Meet the needs and requirements of each client.
- Bring out the unique characteristics of each project.
- Plan and design projects that are environmentally responsible.
- Reduce life cycle costs of your project.
- Provide aesthetically excellent projects that function beautifully.
- Create projects that enhance the quality of life.
